ABSTRACT

Nowadays, one of the final aims of the institutions working on transparency and standardization of financial statements, and the publication of standards related to the profession of accounting & auditing has been to put into practice a uniform global set of standards which will be applicable in finance. Before 2000, in the case of a preference between IFRS & US GAAP regarding which should be internationally accepted uniform set of application, world public opinion used to accept U.S. Generally Accepted Accounting Principles (US GAAP) as reference. Today, great majority of the world takes IFRS as a reference. This study contains evaluations related to the results of research on the thoughts & perceptions of the professionals interested in accounting and auditing about application and development of international financial reporting standards as national financial reporting standards. As a result of the research, it was determined that those interested in accounting and auditing see significant advantages in the application of IFRS. Accountants and auditors think that in case IFRS is applied, comprehensibility and reliability of financial statements shall increase, at the same time accounting frauds shall decrease.

Percepciones de profesionales interesados en contabilidad y auditoría acerca de la aceptación y adaptación de normas internacionales de información financiera

RESUMEN

Hoy en día, uno de los objetivos finales de las instituciones que trabajan por la transparencia y la estándar-ización de los estados financieros y por la publicación de normas relacionadas con la profesión de la contabilidad y la auditoría ha sido poner en práctica un conjunto de normas internacionales uniformizadas que se aplicarán en el mundo financiero. Antes de 2000, cuando había que elegir entre las NIIF y los GAAP estadounidenses como conjunto uniforme, aceptado y de aplicación internacional, la opinión pública mundial tendía a admitir los principios estadounidenses de contabilidad generalmente aceptados (US GAAP) como referencia. Actualmente, en la mayoría de los lugares se toman como referencia las NIIF. En este estudio se incluyen evaluaciones relacionadas con los resultados de la investigación acerca de los pensamientos y las percepciones de los profesionales interesados en contabilidad y auditoría sobre la aplicación y el desarrollo de normas internacionales de información financiera como normas de información financiera nacionales. Como resultado de la investigación, se concluyó que las personas interesadas en contabilidad y auditoría observaron ventajas significativas en la aplicación de las NIIF. Los contables y auditores creen que, si se aplican las NIIF, aumentará la inteligibilidad y la fiabilidad de los estados financieros y, a su vez, se reducirán los fraudes contables.

1. Introduction

International Financial Reporting Standards (IFRS) is a set of principles published in order to establish a financial reporting discipline and an accounting rule to be adopted worldwide. As opposed to US GAAP, which is rule-based, IFRS is principle-based (Carmona & Trombetta, 2008, p. 455). While rules involve specific criteria, constraints or exceptions, a principle-based approach introduces fundamental ideas and evaluations about economic events and transactions. The basic goal behind publishing IFRS by IASB is to enable companies to present their financial information to persons or institutions that accept themselves as related parties in the most correct, reliable and transparent manner. In this sense, the mission of IASB is to ensure a common language in a financial platform by working on the worldwide application of IFRS. Another important feature of IFRS is to prevent related users, especially investors of the financial statements, to incur financial hardship due as a result of incomplete or deceptive information by allowing current financial data and other related company information which may influence a company's future financial position to be publicly known. Competitiveness and efficiency of international capital market depends on information about transactions which is accessible by all users of financial statements. As the process of enhancing harmonization related to accounting and financial reporting standards with those of international accounting can be indicated (Choi et al., 2002, p. 291). In this regard, uncovering the differences in perception of if any, will reduce the limitations of this study. Another limitation is that certain respondents had no comprehensive information or training about financial reporting standards at the time of the data collection. This limitation can be dealt with by national institutions taking responsibility. Another limiting factor is that most Turkish independent audit firms are newly established so are in the early phases of the professional process. Despite all these limitations, the results are reliable as the questionnaires with auditors and accountants involved in the research were conducted face-to-face. The rest of the paper is organized as follows. Section 2 briefly presents literature review of both foreign and domestic surveys. In Section 3, the method used in sample selection is described. Section 4 defines measurement model of the survey in detail. The results and discussions of the study are presented in section 5 and 6.

2. Literature review and research hypothesis

The difficulties of harmonization of international accounting standards experienced both between and within countries have been studied and documented in several studies. Different academic resources are utilized and reviewed in the study. The academic resources are classified in two groups, foreign and domestic studies, which are summarized below respectively. A survey was carried out by Joshi et al. (2008) about the perception of the professionals interested in accounting and auditing in Bahrain in regard to important issues about application and development of global (international) accounting standards. Whether or not being an auditor, participants of the questionnaire revealed that they tended to be optimistic about the necessity of gradual but well implementation and completion of convergence process and that convergence project of IFRS and national financial reporting standards was a useful goal. Another survey was conducted in Spain by Navarro-García and Bastida (2010) for determination of perception of national companies in order to analyze the results of adaptation of IFRS to national financial reporting standards. In the questionnaire conducted upon accounting and finance managers in 63 Spanish companies, IFRS is perceived as a very qualified regulation which is in conformity with decision making processes. At the same time, participants think that there are considerable differences between IFRS and Spanish Accounting Standards, IFRS is very exhaustive & challenging regulation and that in certain situations IFRS is insufficient about creating cost-efficiency in sales. According to the results of the questionnaire, participants do not think that application of IFRS is more convenient than that of national standards.

Rezaee et al. performed a survey (2010) by making use of questionnaire method to evaluate point of view of academicians and practitioners in USA about harmonization of US GAAP and IFRS. Majority of the participants believe that an effective harmonization based on globally adopted accounting standards will be useful for auditors, analysts, those who prepare financial statements and those who set up the standards. Harmonization related to accounting standards in USA is thought to necessitate comprehensive and costly changes in the formation of standards. The process of enhancing...
accounting standards entails investors, managers and auditors in USA and other countries to be subjected to a special training.

In South Pacific Region (Australia, New Zealand, Papua New Guinea and Fiji) in the process of convergence of IFRS and national financial reporting standards, the relation between the specific features of country and the selection of the proper method in the adaptation of IFRS to national financial reporting standards is searched. The factors that are determined to be influential upon the process of convergence to IFRS are the existence of a set of accounting standards used widely in the country during the selection of method, existence and experience of professional accountants, preparation of training and professional courses for professionals, existence of 4 big audit companies and the status of accounting-related-legislation. The results of the study indicate that even after adaptation of IFRS, it is difficult to ensure worldwide comparability of financial reports thoroughly (Chand & Patel, 2008, p. 83).

In Spain and England where contrasting national financial reporting standards and applications are in force, during the first compulsory adaptation of national financial reporting standards to IFRS, a research was realized by Calalao Gastón et al. (2010) on the numerical effect of the adaptation activity in question upon the results of financial statements. In both countries the results of financial statements prepared in accordance with both IFRS and national accounting standards were compared and it was found out that numerical effect on the results of financial statements was high. Together with the application of IFRS, the quality of financial information increased especially from the standpoint of investors.

Timoşenko performed a study (2007) on the effectiveness of application of IFRS conducted in Kirghizistan where IFRS has been used officially since 2000 it was determined that the percentage of utilization of standards was high (90%) but it was seen that only a portion of the standards was used. In addition, the following results were found out; training was needed for the comprehension and application of standards (82.5%) and the use of standards was optional (65%).

In Turkey, a research in 2009 on determining Turkish accounting professionals’ level of information about TAS, a questionnaire was carried out with 768 professionals from different geographical regions of the country. According to the result of the research, while 77% of sworn-in certified public accountant alleged to have knowledge about TAS, rate of those who had enough information was 54%. For certified public accountants, while rate of those having information was 67%, rate of those having sufficient information was 39%. In the case of public accountants having the lowest rates, rate of those who considered their level of information as sufficient was 34%. As the level of education decreased, rate of those having information also decreased (Erdoğan & Dinç, 2009, p. 154).

In 2011, Cankaya and Hatipoglu prepared another study in which 406 professionals were involved, expectations of professionals on application and adoption of TAS/TFRS in Turkey were examined and the factors influencing expectations were determined as follows; education problem about standards (education factor), inappropriateness of existing set of standards for SMEs which constituted an important part of Turkish economy (factor of economic and legal framework), the standards’ having some problems due to their very nature like the way of writing, translation (standard factors), the standards’ possibility of being affected from cultural environment during their application (factor of culture).

In a study conducted by Gonen and Ugurluel (2007), problems in the transition to IFRS applications were searched and 8 different problems were found out. These are technical and complex structure of IFRS, lack of trained personnel knowing IFRS, transition problems from rule-based accounting to principle-based accounting, problems of transparency, fair value approach’s leading to complete-
4 big international auditing firms carry out audit activities in Turkey. These firms play significant roles in the harmonisation of international accounting standards. For the purpose of the questionnaire, the questions were determined by investigating articles published in internationally recognized journals. For using in the questionnaire, questions were taken from Joshi et al. (2008) and adapted. Through the questions in this study, the opinions of Turkish Certified Public Accountants about accounting standards tried to be learned. In the questions of the questionnaire, 5 Likert Scale was used (1 to 5 was used—5=strongly agree (SA); 4=agree (A); 3=neutral (N); 2=disagree (D); 1=strongly disagree (SDA). The answers to the questions of the research and the percentages are indicated in Table 1.

In the first question posed to those interested in accounting and auditing professions, titles of these professions were asked as can be seen in Table 1. Distribution related to the answers indicates that significant part of the respondents is composed of Certified Public Accountants – auditor– with a percentage of 81%. The other part of the respondents is Public Accountants with a percentage of 11.9%. In Turkey, Independent Accounting (Public Accountant) was removed with an amendment dated 10.07.2008 in Public Accountants, Certified Public Accountants and Sworn-in Certified Public Accountants Law No.3568. However, this law recognized those working with title to work. Looking at the average ages of accountants and auditors in the research, 41 years of age and older (46.2%), 36-40 years of age (19.6%) and under-30 years of age (30.2%) are seen. In general, it is seen that half of the accountants and auditors are under-45 years of age. Significant part of professionals responding the questionnaire is composed of males (81.3%) This indicates that the profession has predominantly male-profile. When educational levels of the participants of the questionnaire are examined, it is seen that 53.5% of the respondents graduated from a 40-year-college (university) or a college and 11.6% of them attend a postgraduate programme. Interestingly, being a public accountant or financial advisor requires graduation from at least a 40-year college (university) or a college. It can be seen from the above table that 11.9% -50 persons- of the high school graduates with a percentage of 27.9% –120 persons– work only as accountant. The rest serves as accountant – financial advisor. It can be derived that 7 professionals acquired this title when Law No. 3568 entered into force. Another striking result in the study is that important part of the personnel working in the offices of accountants or auditors (240 persons, 60%) is composed of 2 or more personnel.

The summary of hypotheses

The Hypotheses subject to the research are listed below respectively.

H1: As the perception of accountants and auditors about international accounting standards increases, expected advantages from these standards will also increase.

H2: The idea that benefits of international accounting standards are more than the cost will increase the advantages expected from these standards.

H3: As collaborative work and exchange of information in accounting standards increases, the expected advantages of these standards will also increase.

H4: As common understanding between institutions and practitioners in the development of accounting standards increases, the expected advantages from these standards will also increase.

In this study, questionnaire was used as data collection method. For data evaluation, whether hypotheses are verified or not were tested with the help of statistical methods and SPSS by using SPSS for Windows 18.0 statistic packaged software. For this purpose, factor analyses of variables subjected to the research, reliability analyses, correlation analyses and regression analyses were carried out (Fig. 1).

4.1. Factor analysis results

Data obtained from the application of Questionnaire was subjected to factor analysis in conformity with hypothesis structure. In this analysis, for the purpose of evaluation of perception of accountants and auditors about IFRS, the measurement of whether or not IFRS applications provide an advantage on factors

![Figure 1. Research model: The advantages of application, perception expectancy of those interested in the accounting and auditing professions related to IFRS. UFRS, Uluslararası Finansal Raporlama Standardları.](image-url)
like the perception and interpretation of standards, cost-benefit and accounting responsibility perception etc. was targeted. The perception of standards, cost-benefit, interpretation and accounting responsibility perception behaviors were subjected to analysis as independent variable, the advantages of IFRS applications were subjected to dependent variable as dependant variable. The results related to these variables can be seen in Table 2. Total explained variance was 77.70% as shown in table.

### 4.2. Reliability analysis

In accordance with the factor distribution resulting from as a result of factor analysis, alpha coefficients of every single variable were observed. Values resulting from factor analyses and provided below in Table 3 were quite satisfactory. It is stated that in the literature, for values resulting from reliability analysis to be considered as accepted level, alpha value must be minimum 0.6 (Bagozzi & Yougae, 1988).

| Table 2 | Factor loads of dependant variables |
|-----------------|-----------------|-----------------|-----------------|-----------------|
| Total explained variance: | Perception | Utility | Interpretation | Responsibility |
| 77.70% | .6852 | .7672 | .8302 | .6745 |
| Alpha | Perception of IFRS 1 | Perception of IFRS 2 | Perception of IFRS 4 | Expected utility 1 |
| | .912 | .873 | .572 | .838 |
| | Expected utility 2 | Expected utility 3 | Interpretation of IFRS 1 | Interpretation of IFRS 2 |
| | .619 | .623 | .854 | .845 |
| | Interpretation of IFRS 3 | Responsibility in Practice 1 | Responsibility in Practice 2 | Responsibility in Practice 4 |
| | .896 | .843 | .796 | .724 |

Extraction method: principal component analysis.

Rotation method: varimax with kaiser normalisation.

| Table 3 | The results of reliability analysis, number of questions related to independent and dependent variables and alpha coefficients |
|-----------------|-----------------|-----------------|-----------------|-----------------|
| Name of variable | No. of question | No. of question extracted in analysis | Alpha coefficient (α) |
| 1. Perception | 4 | 1 | Perception 3 | .6892 |
| 2. Utility | 3 | – | – | .7672 |
| 3. Interpretation | 3 | – | – | .8302 |
| 4. Responsibility | 4 | 1 | Responsibility 3 | .6745 |
| 5. IFRS Advantage | 4 | – | – | .6112 |
| Total | 18 | 2 | – | – |

4.3. Correlation analysis results

Table 4 covers correlation coefficients of variables of research subject, averages and standard deviation values. In the analysis process, independent variables were firstly listed then dependant variable was evaluated.

4.4. Regression analysis and hypothesis tests

Model 1: \( Y = \beta_0 + \beta_1 X_1 + \beta_2 X_2 + \beta_3 X_3 + \beta_4 X_4 + \beta_5 X_5 \)

As can be seen from Table 5, dependant variable of IFRS application advantage together with independent variables which are perception, cost-benefit, interpretation and responsibility were subjected to analysis according to Model 1. In regression model, dependant variable application advantage was subjected to analysis. The values obtained as a result of analyses were \( R^2 = .492 \) ve \( F = 10.946 \) ve \( p < .00 \). As a consequence of expressed regression analysis; positive significant correlation was found to be \( p < 0.00 \) between application advantage and interpretation and \( p < 0.05 \) between application advantage and responsibility. These results indicated that \( H_1, H_2, H_3, H_4 \) were established as significant. When a comparison was made on variables with positive contribution, it was concluded that evaluation of IFRS was considered very important with respect to accounting and auditing professionals with high \( \beta \) value of 0.511 and at significant level of \( p < 0.00 \), and concluded that this perception contributed to professionals and their activities, therefore applying IFRS would be advantageous. On the other hand, it was seen that responsibility perception with significant level of \( p < 0.05 \) and with \( \beta \) value like 0.253 created value for accounting and audit professionals. In interpretation performed according to regression analysis of variables related to \( H, \) perception and \( H, \) utility, it was observed that these behaviors did not contribute to providing advantage. In the findings: apart from perception and utility behaviors, interpretation and responsibility perception variables provide advantageous in IFRS applications. Hence, while our hypotheses, perception and utility \( (H_1, H_2) \) did not provide advantage expected from IFRS applications, interpretation and increasing responsibility \( (H_3, H_4) \) will increase advantages expected from application of collaborative works & common understanding, IFRS applications (Table 6; Fig. 2).

| Table 4 | Correlation, average and standard deviation values |
|-----------------|-----------------|-----------------|-----------------|-----------------|
| Variables | Average | Standard deviation | Answered numbers | 1 | 2 | 3 | 4 | 5 |
| 1. Perception | 3.2250 | .7655 | 430 | 1 | \( .521^* \) | 1 |
| 2. Utility | 3.4286 | .8306 | 430 | \( .401^* \) | 1 | \( .427^* \) |
| 3. Interpretation | 3.9841 | .7754 | 430 | \( .158^* \) | \( .236^* \) | \( .509^* \) |
| 4. Responsibility | 3.5476 | .6818 | 430 | \( .360^* \) | \( .456^* \) | \( .591^* \) | \( .623^* \) |
| 5. IFRS Application advantage | 3.8472 | .7973 | 430 | | | | |

**Correlation, significant at level \( p = 0.01 \) (Duplex).
In this study, expectations of accountants and auditors related to accounting and auditing activities in regard to IFRS were taken up. The effect of utility, perception, interpretation and responsibility behaviours of those dealing with accounting and auditing activities on IFRS application advantage to be obtained was tested. In the global world of today, facilitation of international capital movements caused accounting and auditing activities to be more important. Performing accounting records in accordance with international and national standards is of vital importance for those who will benefit from these records and reports. In this regard, audit; on the one hand meets needs of the management, on the other hand serves as a development protecting rights of investors which is one of the aims of external audit (Atkinson, 1946). This study is about learning the thoughts of those interested in accounting and audit professions regarding the adaptation of IFRS at national level. Additionally, this study explored how these practitioners’ level of perception of IFRS, cost-benefit, interpretation and responsibility influenced application advantage.

In the findings obtained in the research, international financial reporting standards are considered as applicable standards in the country by accounting and auditing professionals. In order to increase application of the standards at national level, increase in collaboration and information flow among institutions are necessary. Especially respondents believe that for having a common interpretation of IFRS, the participation of the institutions like Capital Market Board (CMB), Turkish Accounting Standards Board (TASB) and Union of Chambers of Certified Public Accountants and Sworn-in Certified Public Accountants in Turkey (UCCPAT) is essential. In such a case, they expressed that they would agree on the idea of ‘necessary for interpreting the standards’ with a percentage of (Appendix b) 4.21. Respondents consider that standards are prepared according to certain principles. As shown in Table 5 and Table 6, respondents in the analysis of the research see a linear relationship between application and interpretation with high level of .510**. In this regard, as collaboration and information flow in accounting standards increase, these standards will be interpreted well and hence advantages expected from these standards will increase. These advantages can be viewed as facilitation of comparability of financial statements in the World, transparency and reliability of financial statements and reducing illegal activities especially frauds in preparation of financial statements. On the other hand accountants and auditors believe that the understanding of the standards and the contribution from the application. The important result of this analysis is that majority of the respondents (Appendix b, average 4.23) agreed on the idea that application training of IFRS should be under the responsibility of state. Furthermore, the result obtained from other questions is that there are expectations from public institutions in IFRS adaptations. During analysis, it was derived from 3rd Analysis, from the questions related to responsibility variable. This is reverse question. In this question, respondents did not agree that IFRS application training should be ensured through personal efforts. In the other questions, the participants believe that public institutions (universities, standard boards, professional institutions etc.) should play role in the adaptation of IFRS. Then, as common understanding between institutions and practitioners in the development of accounting. On the other hand, it seems interesting that respondents’ IFRS perception levels have no effect on application advantage. Nevertheless, respondents do not consider the utility thought to be provided by IFRS applications as an advantage. As a result of analysis, a linear relationship could not be found between these variables and application advantage. In this sense, on national basis, public institutions and professional organisations should make more efforts for extending IFRS. This effort should also be made by accountants and auditors. Internal auditor and practitioners should help each other for application of accounting (Janvrin et al., 2010). As a result, the basic conclusion provided from the study, by taking responsibility in IFRS applications, accounting and auditing professionals may increase accounting application advantage depending on cooperation. Another result is that in order to increase expected advantage it is necessary for auditing institutions and professional institutions to assume responsibility. Globally operating companies need applications with the same universal language. In this regard, there should not be applications which will cause confusion in interpretation of the financial statements (balance sheet and income statement). This is because those conducting business in financial markets pay importance to the reliability of financial statements. When those who prepare these statements manage to be professional in their business, public will be enlightened better and in turn this will make contribution to analyses of user of financial statement.

6. Discussion

This study is conducted to measure the views of professionals dealing with accounting and auditing activities about application of
Appendix A

Part I

a. Perception of IFRS

1. I believe that IFRS applications will be useful
   1 2 3 4 5
2. The works to be done for IFRS application will remove serious problems
   1 2 3 4 5
3. IFRS is a high target which is never to be achieved
   1 2 3 4 5
4. IFRS will increase cooperation in the future despite its being costly & time-consuming
   1 2 3 4 5

b. Main advantages of IFRS

5. IFRS will make comparability of financial statements in the world easier
   1 2 3 4 5
6. Transparency and reliability of financial statements of the companies in different countries will be ensured
   1 2 3 4 5
7. IFRS’s application costs will decrease significantly over time
   1 2 3 4 5
8. Application of IFRS decreases illegal activities especially frauds
   1 2 3 4 5

c. Benefits and costs of IFRS

12. IFRS application will increase the benefits of usage while enabling cooperation on an international scale
    1 2 3 4 5
13. IFRS will make more contribution than expected costs of application benefits
    1 2 3 4 5
14. A serious cost-benefit analysis is needed before using IFRS
    1 2 3 4 5

d. Development of common understanding and interpretation to prevent the application differences of IFRS

17. I believe that IFRS standards are prepared in accordance with certain principles
    1 2 3 4 5
18. In order to establish a common interpretation of IFRS, the international regulatory bodies (such as IASB-IFRIC) must lead
    1 2 3 4 5
19. In order to establish a common interpretation of IFRS, on a local basis, the partnership of the institutions like CMB (SPK),
    TASB (TMSK) and UCCPAT (TURMOB) is also required for the purpose of interpreting standards
    1 2 3 4 5

e. Educational responsibility of accountants in the application of IFRS

23. Education of IFRS application should be made at university level
    1 2 3 4 5
24. Education of IFRS application should be provided through vocational training
    1 2 3 4 5
25. Education of IFRS application should be attained through personal efforts
    1 2 3 4 5
26. Education of IFRS application should be under the responsibility of state
    1 2 3 4 5

Part II

Organizational profile

1. Title:

CPA, Certified Public Accountant (SMMM); Sworn-in CPA: Sworn-in Certified Public Accountant (YMM); PA, Public Accountant (SMM).

IFRS also in Turkey. The prepared questions are collected under four dependant variable and an independent variable. As a result of the conducted analysis, for accountants and auditors to take advantage of IFRS applications and for ensuring a common interpretation of IFRS, international regulatory institutions (IASB-IFRIC) should play regulatory role and also at the national level the institutions like CMB, TASB and UCCPAT should act as partners for these studies. The more corporate studies and application are conducted to consolidate the standards, the more the expected utility from the analysis of IFRS as basic standard increases proportionally. On the other hand, the more training at university and professional level for development of the standards and public sector assumes responsibility, the more advantages expected from IFRS applications increase proportionally. In the analysis of answers given to the research questions, as can be seen above, those interested in accounting and auditing consider the interpretation of standards in IFRS applications and institutions’ assuming responsibility as a positive approach for the application advantage expected from the standards. Nonetheless, the same professionals consider cost-benefit analysis as significant for application advantage of IFRS. In other words, they hold that IFRS applications will be more costly when compared to the expected utility. Anyway, in the long run, both undertakings and users will gain significant benefits from these applications. Especially, ensuring uniform accounting records and consistency of reports (balance sheet, income statement etc.) obtained from these records will be available through comprehension of IFRS applications better. In this regard, this study is designed for the purpose of contribute to literature and to learn the views of Turkish accountants and auditors. For generalization of the study, if academic studies are conducted from the perspective of other regions, this will provide positive results. In the final analysis, the contribution of this study may be limited. However, as based on scientific research, this study draws attention to the further studies to be conducted in Turkey related to this subject in the future.

Authors

Orhan Bozkurt has been working as an Assistant Professor in the Faculty of Inegöl Business at Uludağ University, Turkey since 2012. He received a PhD degree in cost accounting field from the Gebze Institute of Technology (GIT), Kocaeli, Turkey, in 2004. His primary specialization is cost of production. His research interests are cost management and corporate performance.

Mehmet İsmailoğlu completed his MS education at 1997 in Business Administration Department at Marmara University. In early 2002, he received a BS Degree in Financial Audit from University of Istanbul. He had a professional carrier in Turkish Banking Industry between 1998 and 2010. He received his Phd Degree from Finance and Banking Program of Kadir Has University, Istanbul at 2010. Since 2010, he has been working as an Assistant Professor of Finance at Bartın University. His research interests are financial reporting, valuation of fixed income securities and capital markets.

Yaşar Öz has been working as an Assistant Professor of Business Administration at Bartın University, Turkey since 2009. He completed his BS education in Business Administration at Atatürk University in 1996. He received MSc and PhD degrees in the same field from Atatürk University, Erzurum, Turkey respectively in 1999 and 2005. His primary concerns are financial accounting and auditing.
